Mission Statement

To ensure our customers automotive vehicles and machinery are operating at optimum levels, in order to maximise their mobility and business efficiency.

Profile

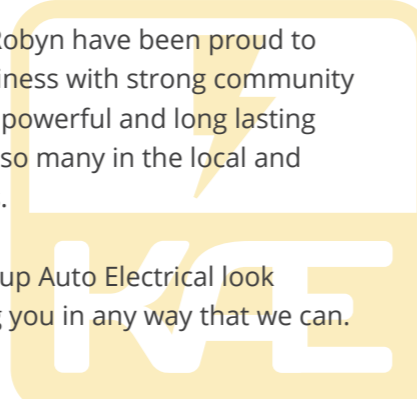

In 1986 local Kojonup lad Roy Bailey saw an opportunity to establish a business to meet the ever-growing demands of locals needing good auto electrical services and quality products for their agricultural and passenger vehicles.

Now entering it's 30th year, Kojonup Auto Electrical has grown to become a vital cog in the Kojonup community, helping keep citizens and their businesses mobile. The business has fostered a strong culture of quality training, which has enabled many young technicians to forge a career in the industry. This culture of quality permeates every aspect of the enterprise, from the rigorous technical training apprentices receive, to the commitment to clients, through to the products they stock.

The business has become well-known for being able to fix complex electrical mechanical issues due to the experience and expertise gained over many years of working on passenger, trucks and agricultural vehicles.

Roy with his wife Robyn have been proud to build a strong business with strong community support and build powerful and long lasting relationships with so many in the local and surrounding areas.

The team at Kojonup Auto Electrical look forward to helping you in any way that we can.

Our Seven Pillars

Here's some important factors that we believe help to define what makes us tick. We call them Our 7 Pillars because they're the fundamental foundations of our enterprise.

1. Experience

Nothing beats it. It always has been and always will be the best teacher. We've developed an extensive knowledge base over many years by working on many types of equipment on multiple occasions. Further we've developed methodologies for logging the data and now have an extensive resource library of 'how' to's which can be passed on.

2. Diversity

Our expertise has been built through working on a wide range of electrical equipment and machinery as diverse as you're likely to find anywhere.

3. Ingenuity

We're expert fault-finders and fixers! The necessity to keep clients mobile and their businesses operational has led to us developing innovative diagnostic methods and solutions.

4. Fit for purpose

With a high level of technical expertise we are able to be very specific in the solutions we provide. We only fix and design what is essential to get the job done. We don't add any unnecessary bells and whistles that you don't need or that will cost more.

5. Training Excellence

Excellence must be passed on for it's continuation. We train our own with the highest levels of standards possible - a case of "the best training the best". In doing this we ensure that the longevity of our service expertise and business specialisation surpasses the individual 'expert'.

6. Flexibility

At the end of the day it's about getting a result for our clients in the shortest time-frame possible. If this means working past the normal hours to get a harvester back doing what it's supposed to or putting extra hands to tools to meet urgent demands, we can and we will. We love our community and support it to the hilt.

7. Reliability

We design solutions to work and fix things to stay fixed and only ever use quality components and best of breed products.
